

# Bassi Logic™

## A Monumental Leap for NiTi Files.

### Continuous Rotary Single-file System

Bassi Logic™ is a single file continuous rotary NiTi system created for simplicity. In fact, it is shown to have greater performance and safety than single-file reciprocating file systems. Since its introduction, 6,500 clinicians have already found it to be the most advanced, yet simplest endodontic file they have ever used.

### Unique Cross-Sections = Unmatched Sharpness

Every file is designed with a specific helix that promotes the highest cutting efficiency and reduces the screwing effect as much as possible. Studies have shown Bassi Logic™ completes instrumentation in a third less time than leading single file systems†.

### 3.5x the Cyclic Fatigue Resistance

In comparative studies, Bassi Logic™ files have been shown to have significantly greater resistance to cyclic fatigue and high torsional resistance when compared with other single file systems\*.

### Advanced Heat Treatments for Controlled Memory

At Bassi, we use a proprietary heat treatment process for achieving the strongest cyclic fatigue and high torsional resistance. The resulting controlled memory can negotiate any curved canal with conservative preparation. With Bassi Logic™ it only takes a single shaping file to prepare the entire root canal.

### Ready for the Minimally Invasive Future? Meet the 03

We believe the future of endodontics is minimally invasive and the Bassi Logic 03™ taper is the file for that future. Super thin with superior strength and cyclic fatigue resistance, allowing for conservative shaping—safely and with confidence.
